

WALEED BINSAAD

Software Engineer | C#.NET | React | Azure | SQL Server

Melbourne, VIC | waleed.binsaad0@gmail.com | linkedin.com/in/wbinsaad | github.com/wbinsaad

Full Australian working rights | Open to software engineering opportunities

PROFESSIONAL SUMMARY

.NET software engineer experienced in delivering and supporting production web applications using C#, .NET, React, REST APIs and SQL Server. Contributed across requirements analysis, application design, implementation, deployment and production support, including Azure App Service, Docker, Terraform and CI/CD. Also brings Python/Flask automation, GitLab delivery and pytest test-driven development experience.

TECHNICAL CAPABILITIES

Application development	C#, .NET, ASP.NET Core, React, JavaScript, TypeScript, HTML, CSS
APIs and data	REST APIs, SQL Server, stored procedures, triggers, schema design, EF Core, PostgreSQL
Cloud and delivery	Azure App Service, Docker, Terraform, GitHub Actions, GitLab CI/CD, GitLab Runner
Quality and support	Unit testing, pytest, TDD, analysers, structured logging, debugging, production support
Python ecosystem	Python, Flask, Django, Bash scripting, automation
Ways of working	Requirements analysis, Jira, Confluence, Agile delivery, pull-request review

PROFESSIONAL EXPERIENCE

Software Engineer | Infineon Technologies AG

May 2025 - Mar 2026 | Munich, Germany

- Built Python and Flask tools that generated Bash scripts to automate backup work for the DES department.
- Applied test-driven development with pytest, recording 80% test coverage to improve maintainability.
- Maintained GitLab Runner configuration and diagnosed defects, dependencies and workflow failures.
- Documented troubleshooting guidance in Confluence and tracked technical work through Jira.

Software Engineer | Aquat Food Industries

May 2022 - Oct 2024 | Jeddah, Saudi Arabia

- Developed and supported C#, .NET, React, JavaScript and SQL Server business applications for more than 3,000 users.
- Delivered an employee evaluation platform from requirements and design through implementation, testing, deployment and support.
- Designed REST API integrations and database workflows using stored procedures, triggers and schema changes.
- Worked with Azure App Service, Docker, Terraform and GitHub Actions across test and production environments.
- Diagnosed application, API and database issues and worked with operational stakeholders to prioritise maintainable changes.

IT Production Support | International Expertise Wood Industries

Aug 2021 - May 2022 | Jeddah, Saudi Arabia

- Supported hardware, software, network access and operational systems under day-to-day production pressure.
- Documented technical issues and resolutions to improve repeatability and future troubleshooting.

SELECTED PROJECTS AND OPEN SOURCE

JobFlowAutomation | Creator and Maintainer | github.com/wbinsaad/JobFlowAutomation

- Developing a .NET 10 and Selenium workflow application that stores structured job listings in PostgreSQL through Entity Framework Core.
- Separates Domain, Application, Infrastructure, Configuration and Worker concerns with dependency injection and the Options pattern.
- Includes canonical URL deduplication, scrape-run history, structured logging, nullable reference types, analysers and a dedicated test project.

Integreat CMS | Digitalfabrik | github.com/digitalfabrik/integreat-cms

- Contributed two merged Python/Django pull requests: a username-change workflow and improvements to phone-number autolinking/editor behaviour.

EDUCATION

Bachelor of Information Technology | King Abdulaziz University | 2020

Senior project: IoT smart-garden automation using Python, Flask, SQL, Raspberry Pi, Arduino and C++.
